Portfolio: keepon-portfolio.onrender.com

Professional Summary

Final year Software Engineering student at Xiamen University Malaysia with hands-on experience developing full-stack web applications, mobile solutions, and immersive Unity XR applications. Experienced in designing, developing, and deploying production-ready software using modern technologies including React, Node.js, ASP.NET Core, Flutter, Unity, and cloud platforms.

Co-founder of a logistics technology startup and developer of an AI-powered Augmented Reality anatomy learning platform that combines Unity, AR Foundation, voice interaction, and artificial intelligence to enhance educational experiences. Passionate about building technology that creates meaningful social impact through digital innovation, human-centered design, and scalable software solutions.

Seeking internship opportunities to contribute strong technical, analytical, and collaborative skills within organizations, where software engineering can support education, digital transformation, and sustainable development initiatives.

Education

Bachelor of Engineering (Software Engineering) | Xiamen University Malaysia

2023 – Present | CGPA: 3.49 / 4.00

Relevant Areas:

- *Software Engineering*
- *Web Development*
- *Database Systems*
- *Mobile Application Development*
- *Human Computer Interaction*
- *Object-Oriented Programming*

Secondary Education | Mang'u High School, Kenya

2018 – 2021

Work Experience

Co-Founder & Full Stack Developer | Amanah Logistics | amanahlogistics.com

January 2025 – April 2026

Co-founded and led the development of a production-ready logistics platform connecting customers, businesses, administrators, and delivery riders.

- Designed and implemented over 20 RESTful APIs using Node.js and Express.js for authentication, order processing, delivery management, rider operations, and administrative services.
- Developed Flutter mobile application features including delivery acceptance, GPS navigation, earnings tracking, order history, and live delivery status.
- Integrated Supabase for authentication, cloud database management, and real-time synchronization.
- Configured AWS EC2, Docker, and Nginx to deploy scalable production infrastructure.
- Collaborated with stakeholders to translate business requirements into technical solutions and improve operational efficiency through workflow automation.
- Participated in UI/UX planning, software architecture, testing, debugging, and deployment.

Projects

Amanah Logistics Platform

January 2025 – December 2025

A complete logistics management system supporting businesses, customers, riders, and administrators.

- Developed scalable backend services using Node.js and Express.
- Built responsive web interfaces and Flutter mobile application.
- Implemented authentication, delivery assignment, order tracking, and real-time updates.
- Configured cloud deployment using AWS EC2 and Nginx.

Technologies:

React, Node.js, Express.js, Flutter, Supabase, AWS EC2, Nginx, REST APIs

BioScope – AI Powered AR Human Anatomy Learning Platform

April 2026 – July 2026

An Android-based Augmented Reality educational application developed in Unity to improve anatomy learning through interactive 3D visualization and artificial intelligence.

Key Contributions

- Developed the application using Unity and C#.
- Implemented interactive 3D anatomy visualization using AR Foundation.
- Built gaze-based object selection and interactive bone information panels.
- Integrated Google's Gemini AI API to provide intelligent anatomy explanations and personalized learning assistance.
- Developed AI-generated quizzes based on user learning progress.
- Implemented voice recognition and speech synthesis for hands-free interaction.
- Designed intuitive user interfaces focused on educational usability and accessibility.
- Optimized Android performance and AR interaction for mobile devices.
- Conducted usability evaluation and iterative improvements based on user feedback.

Technologies:

Unity, C#, AR Foundation, Android, Gemini AI API, XR Interaction, UI Design, Git

Personal Portfolio Website

2026

Designed and developed a modern portfolio website showcasing software engineering projects and technical experience.

- Developed responsive layouts using modern web technologies.
- Optimized for desktop and mobile viewing.
- Deployed using Docker and Render.

Technologies:

HTML, CSS, JavaScript, Bootstrap, ASP.NET Core MVC, Docker, Render

Freewill Store

2025

url: freewillco.xyz

Developed an e-commerce platform for my Freewill Clothing brand.

- Created responsive storefront pages and product catalog views.
- Implemented shopping cart and checkout workflows.
- Developed administrative dashboard functionality.
- Designed user-focused interfaces and customer journeys.

Technologies:

ASP.NET Core MVC, HTML, CSS, JavaScript, Bootstrap, SQL Server Bootstrap

Technical Skills

Front-End Development:

- HTML5
- CSS3
- React
- JavaScript
- Bootstrap
- Responsive Web Design
- UI/UX Design
- Tailwind CSS

Programming Languages:

- JavaScript (ES6+)
- C#
- Kotlin
- SQL
- C

Frameworks & Platforms:

- ASP.NET Core MVC
- .NET Framework
- Flutter
- Node.js
- Express.js
- Unity

Databases & Cloud:

- SQL Server
- Firebase
- Supabase
- AWS EC2

Unity & XR Development

- Unity Engine
- C#
- AR Foundation
- XR Interaction Toolkit
- Android Build Pipeline
- 3D User Interface Design
- Physics & Animation
- Educational Game Development
- Mobile AR Optimization
- AI Integration (Gemini API)
- Voice Interaction

Tools:

- Git
- GitHub
- Docker
- Postman

- Nginx
